

Transformations in Ray Tracing

MIT EECS 6.837, Durand and Cutler

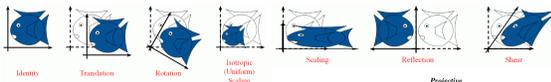

Linear Algebra Review Session

- Tonight!
- Room 2-139
- 7:30 – 9 PM

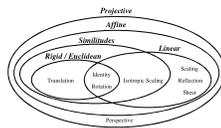

MIT EECS 6.837, Durand and Cutler

Last Time:

- Simple Transformations

- Classes of Transformations
- Representation
 - homogeneous coordinates
- Composition
 - not commutative

$$\begin{bmatrix} x' \\ y' \\ z' \\ 1 \end{bmatrix} = \begin{bmatrix} a & b & c & d \\ e & f & g & h \\ i & j & k & l \\ 0 & 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} x \\ y \\ z \\ 1 \end{bmatrix}$$

MIT EECS 6.837, Durand and Cutler

Today

- **Motivations**
- Transformations in Modeling
- Adding Transformations to our Ray Tracer
- Constructive Solid Geometry (CSG)
- Assignment 2

MIT EECS 6.837, Durand and Cutler

Modeling

- Create / acquire objects
- Placing objects
- Placing lights
- Describe materials
- Choose camera position and camera parameters
- Specify animation
-

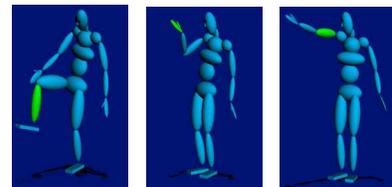

Stephen Duck

MIT EECS 6.837, Durand and Cutler

Transformations in Modeling

- Position objects in a scene
- Change the shape of objects
- Create multiple copies of objects
- Projection for virtual cameras
- Animations

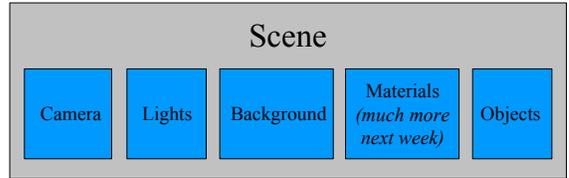

MIT EECS 6.837, Durand and Cutler

Today

- Motivations
- Transformations in Modeling
 - Scene description
 - Class Hierarchy
 - Transformations in the Hierarchy
- Adding Transformations to our Ray Tracer
- Constructive Solid Geometry (CSG)
- Assignment 2

MIT EECS 6.837, Durand and Cutler

Scene Description

MIT EECS 6.837, Durand and Cutler

Simple Scene Description File

```

OrthographicCamera {
  center 0 0 10
  direction 0 0 -1
  up 0 1 0
  size 5 }

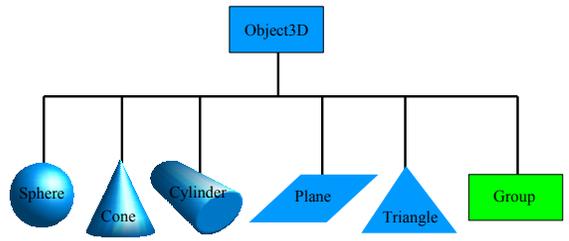

Lights {
  numLights 1
  DirectionalLight {
    direction -0.5 -0.5 -1
    color 1 1 1 } }

Background { color 0.2 0 0.6 }

Materials {
  numMaterials <n>
  <MATERIALS> }

Group {
  numObjects <n>
  <OBJECTS> }
    
```

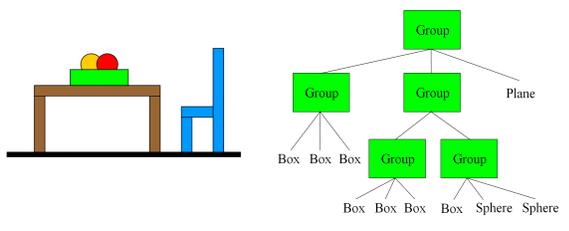

Class Hierarchy

MIT EECS 6.837, Durand and Cutler

Why is a Group an Object3D?

- Logical organization of scene

Simple Example with Groups

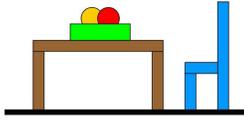

```

Group {
  numObjects 3
  Group {
    numObjects 3
    Box { <BOX PARAMS> }
    Box { <BOX PARAMS> }
    Box { <BOX PARAMS> } }
  Group {
    numObjects 2
    Group {
      Box { <BOX PARAMS> }
      Box { <BOX PARAMS> }
      Box { <BOX PARAMS> } }
    Group {
      Box { <BOX PARAMS> }
      Sphere { <SPHERE PARAMS> }
      Sphere { <SPHERE PARAMS> } } }
  Plane { <PLANE PARAMS> } }
    
```

Adding Materials

```

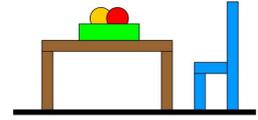

Group {
  numObjects 3
  Group {
    numObjects 3
    Box { <BOX PARAMS> }
    Box { <BOX PARAMS> }
    Box { <BOX PARAMS> } }
  Group {
    numObjects 2
    Group {
      Box { <BOX PARAMS> }
      Box { <BOX PARAMS> }
      Box { <BOX PARAMS> } }
    Group {
      Box { <BOX PARAMS> }
      Sphere { <SPHERE PARAMS> }
      Sphere { <SPHERE PARAMS> } } }
  Plane { <PLANE PARAMS> } }
  
```

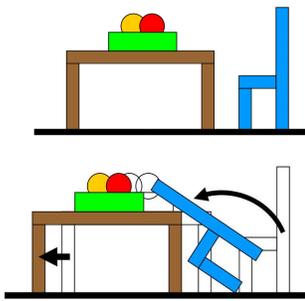

Adding Materials

```

Group {
  numObjects 3
  Material { <BROWN> }
  Group {
    numObjects 3
    Box { <BOX PARAMS> }
    Box { <BOX PARAMS> }
    Box { <BOX PARAMS> } }
  Group {
    numObjects 2
    Material { <BLUE> }
    Group {
      Box { <BOX PARAMS> }
      Box { <BOX PARAMS> }
      Box { <BOX PARAMS> } }
    Group {
      Material { <GREEN> }
      Box { <BOX PARAMS> }
      Material { <RED> }
      Sphere { <SPHERE PARAMS> }
      Material { <ORANGE> }
      Sphere { <SPHERE PARAMS> } } }
  Material { <BLACK> }
  Plane { <PLANE PARAMS> } }
  
```

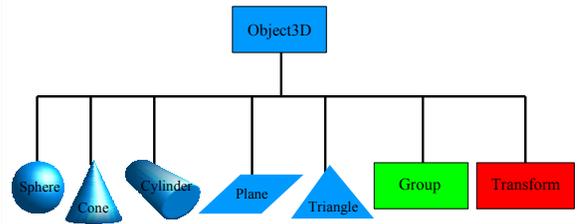

Adding Transformations

MIT EECS 6.837, Durand and Cutler

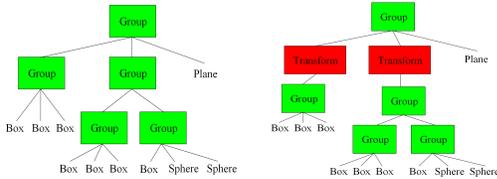

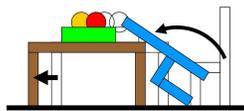

Class Hierarchy with Transformations

MIT EECS 6.837, Durand and Cutler

Why is a Transform an Object3D?

- To position the logical groupings of objects within the scene

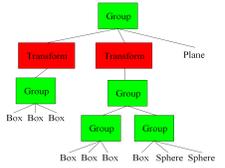

MIT EECS 6.837, Durand and Cutler

Simple Example with Transforms

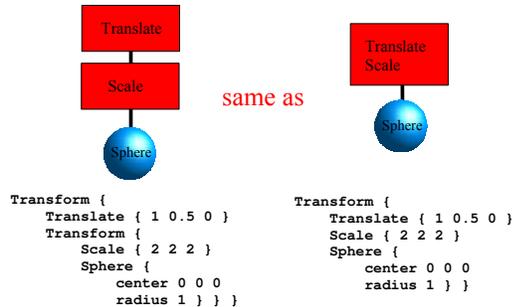

```

Group {
  numObjects 3
  Transform {
    ZRotate { 45 }
    Group {
      numObjects 3
      Box { <BOX PARAMS> }
      Box { <BOX PARAMS> }
      Box { <BOX PARAMS> } } }
  Transform {
    Translate { -2 0 0 }
    Group {
      numObjects 2
      Group {
        Box { <BOX PARAMS> }
        Box { <BOX PARAMS> }
        Box { <BOX PARAMS> } }
      Group {
        Box { <BOX PARAMS> }
        Sphere { <SPHERE PARAMS> }
        Sphere { <SPHERE PARAMS> } } } }
  Plane { <PLANE PARAMS> } }
  
```

Nested Transforms

$$p' = T(S p) = TS p$$

MIT EECS 6.837, Durand and Cutler

Questions?

Today

- Motivations
- Transformations in Modeling
- Adding Transformations to our Ray Tracer
 - Transforming the Ray
 - Handling the depth, t
 - Transforming the Normal
- Constructive Solid Geometry (CSG)
- Assignment 2

MIT EECS 6.837, Durand and Cutler

Incorporating Transforms

1. Make each primitive handle any applied transformations

```

Sphere {
  center 1 0.5 0
  radius 2
}
  
```

2. Transform the Rays

```

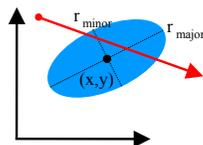

Transform {
  Translate { 1 0.5 0 }
  Scale { 2 2 2 }
  Sphere {
    center 0 0 0
    radius 1
  }
}
  
```

MIT EECS 6.837, Durand and Cutler

Primitives handle Transforms

```

Sphere {
  center 3 2 0
  z_rotation 30
  r_major 2
  r_minor 1
}
  
```

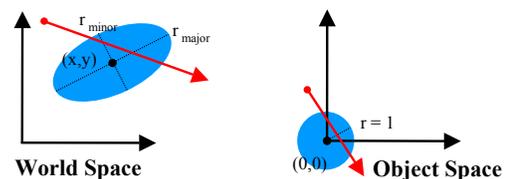

- Complicated for many primitives

MIT EECS 6.837, Durand and Cutler

Transform the Ray

- Move the ray from *World Space* to *Object Space*

$$p_{OS} = \mathbf{M} p_{WS}$$

$$p_{WS} = \mathbf{M}^{-1} p_{OS}$$

Transform Ray

- New origin:
 $origin_{OS} = M^{-1} origin_{WS}$
- New direction:
 $direction_{OS} = M^{-1} (origin_{WS} + 1 * direction_{WS}) - M^{-1} origin_{WS}$
 $direction_{OS} = M^{-1} direction_{WS}$

MIT EECS 6.837, Durand and Cutler

Transforming Points & Directions

- Transform point

$$\begin{pmatrix} x' \\ y' \\ z' \\ 1 \end{pmatrix} = \begin{pmatrix} a & b & c & d \\ e & f & g & h \\ i & j & k & l \\ 0 & 0 & 0 & 1 \end{pmatrix} \begin{pmatrix} x \\ y \\ z \\ 1 \end{pmatrix} = \begin{pmatrix} ax+by+cz+d \\ ex+fy+gz+h \\ ix+jy+kz+l \\ 1 \end{pmatrix}$$
- Transform direction

$$\begin{pmatrix} x' \\ y' \\ z' \\ 0 \end{pmatrix} = \begin{pmatrix} a & b & c & d \\ e & f & g & h \\ i & j & k & l \\ 0 & 0 & 0 & 1 \end{pmatrix} \begin{pmatrix} x \\ y \\ z \\ 0 \end{pmatrix} = \begin{pmatrix} ax+by+cz \\ ex+fy+gz \\ ix+jy+kz \\ 0 \end{pmatrix}$$

Homogeneous Coordinates: (x,y,z,w)
 $w = 0$ is a point at infinity (direction)

MIT EECS 6.837, Durand and Cutler

What to do about the depth, t

If M includes scaling, $direction_{OS}$ will NOT be normalized

1. Normalize the direction
2. Don't normalize the direction

MIT EECS 6.837, Durand and Cutler

1. Normalize direction

- $t_{OS} \neq t_{WS}$
and must be rescaled after intersection

MIT EECS 6.837, Durand and Cutler

2. Don't normalize direction

- $t_{OS} = t_{WS}$
- Don't rely on t_{OS} being true distance during intersection routines (e.g. geometric ray-sphere intersection, $a \neq 1$ in algebraic solution)

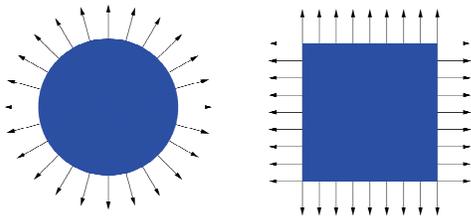

MIT EECS 6.837, Durand and Cutler

Questions?

MIT EECS 6.837, Durand and Cutler

New component of the Hit class

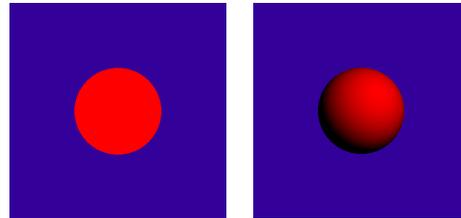

- Surface Normal: unit vector that is locally perpendicular to the surface

MIT EECS 6.837, Durand and Cutler

Why is the Normal important?

- It's used for shading — makes things look 3D!

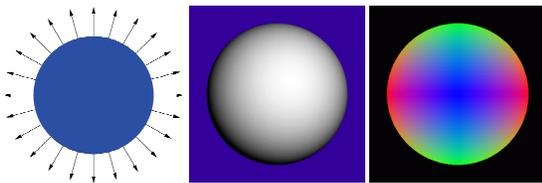

object color only
(Assignment 1)

Diffuse Shading
(Assignment 2)

MIT EECS 6.837, Durand and Cutler

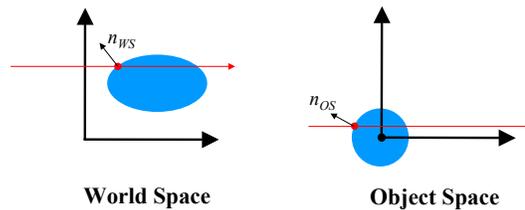

Visualization of Surface Normal

$\pm x$ = Red
 $\pm y$ = Green
 $\pm z$ = Blue

MIT EECS 6.837, Durand and Cutler

How do we transform normals?

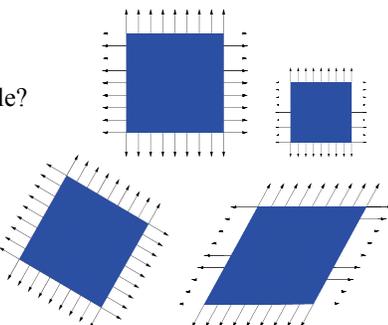

World Space

Object Space

MIT EECS 6.837, Durand and Cutler

Transform the Normal like the Ray?

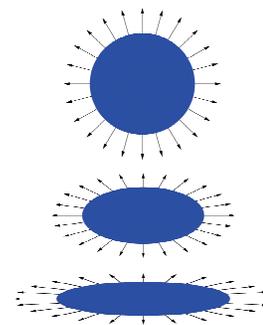

- translation?
- rotation?
- isotropic scale?
- scale?
- reflection?
- shear?
- perspective?

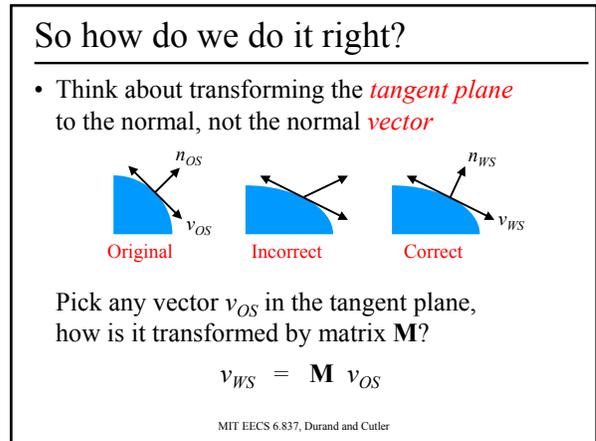

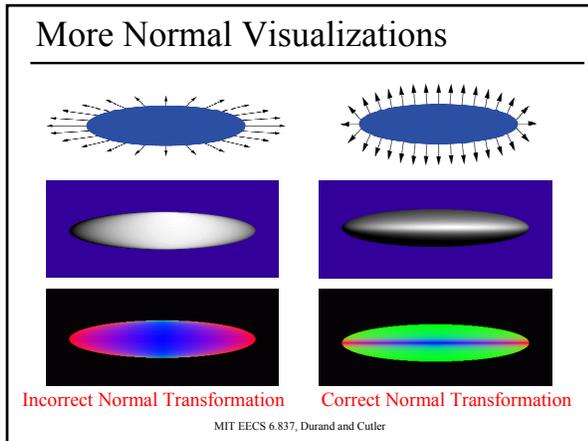

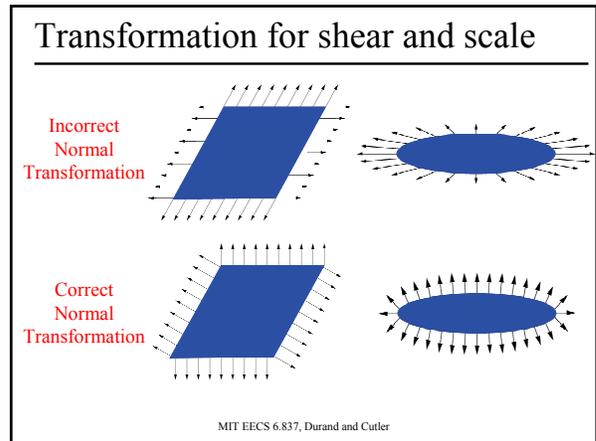

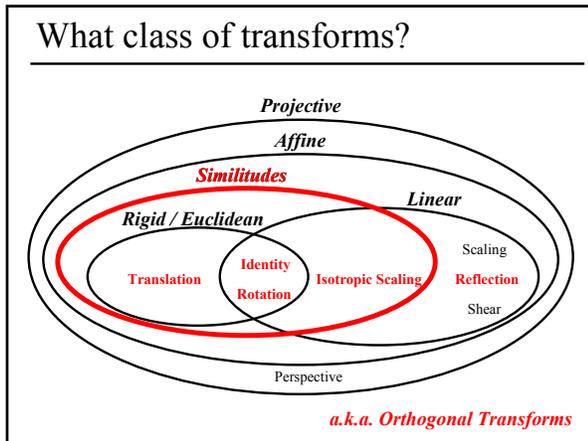

MIT EECS 6.837, Durand and Cutler

Transform the Normal like the Ray?

- translation?
- rotation?
- isotropic scale?
- scale?
- reflection?
- shear?
- perspective?

MIT EECS 6.837, Durand and Cutler

Transform tangent vector v

v is perpendicular to normal n :

$$n_{OS}^T v_{OS} = 0$$

$$n_{OS}^T (\mathbf{M}^{-1} \mathbf{M}) v_{OS} = 0$$

$$(n_{OS}^T \mathbf{M}^{-1}) (\mathbf{M} v_{OS}) = 0$$

$$(n_{OS}^T \mathbf{M}^{-1}) v_{WS} = 0$$

v_{WS} is perpendicular to normal n_{WS} :

$$n_{WS}^T = n_{OS} (\mathbf{M}^{-1})$$

$$n_{WS} = (\mathbf{M}^{-1})^T n_{OS}$$

$$n_{WS}^T v_{WS} = 0$$

MIT EECS 6.837, Durand and Cutler

Comment

- So the correct way to transform normals is:

$$n_{WS} = (\mathbf{M}^{-1})^T n_{OS}$$
- But why did $n_{WS} = \mathbf{M} n_{OS}$ work for similitudes?
- Because for similitude / similarity transforms,

$$(\mathbf{M}^{-1})^T = \lambda \mathbf{M}$$
- e.g. for orthonormal basis:

$$\mathbf{M} = \begin{bmatrix} u_x & u_y & u_z \\ v_x & v_y & v_z \\ n_x & n_y & n_z \end{bmatrix} \quad \mathbf{M}^{-1} = \begin{bmatrix} x_u & x_v & x_n \\ y_u & y_v & y_n \\ z_u & z_v & z_n \end{bmatrix}$$

- Assignment 2

MIT EECS 6.837, Durand and Cutler

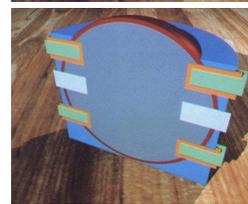

Constructive Solid Geometry (CSG)

Given overlapping shapes A and B:

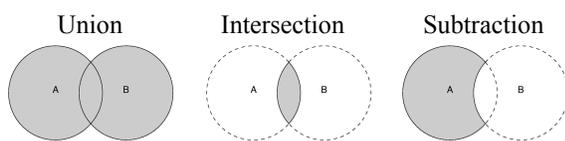

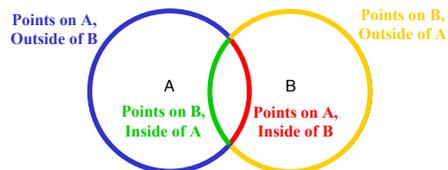

MIT EECS 6.837, Durand and Cutler

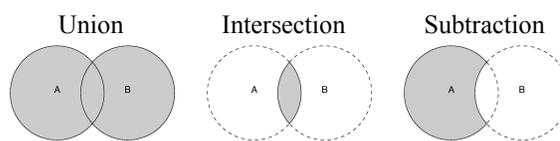

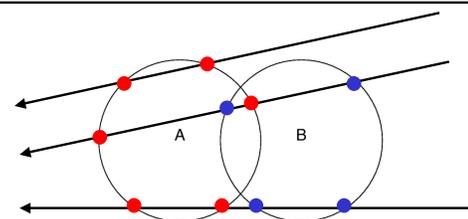

For example:

How can we implement CSG?

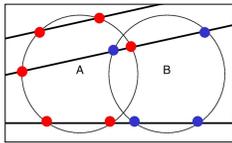

Collect all the intersections

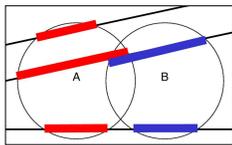

Implementing CSG

1. Test "inside" intersections:
 - Find intersections with A, test if they are inside/outside B
 - Find intersections with B, test if they are inside/outside A

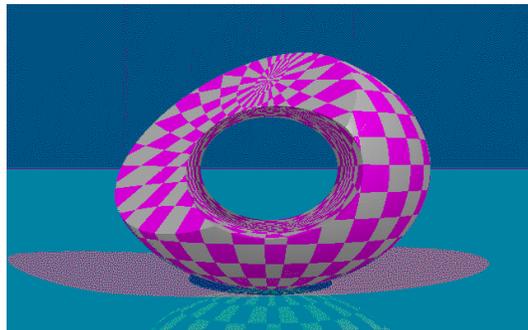

2. Overlapping intervals:
 - Find the intervals of "inside" along the ray for A and B
 - Compute union/intersection/subtraction of the intervals
