

How to Take/Make Better Pictures

Bill Freeman
Frédo Durand
MIT - EECS

Poisson image editing

- **Two aspects**
 - When the new gradient is conservative:
Just membrane interpolation to ensure boundary condition
 - Otherwise: allows you to work with non-conservative vector fields and
- **Why is it good?**
 - More weight on high frequencies
 - Membrane tries to use low frequencies to match boundaries conditions
 - Manipulation of the gradient can be cool
(e.g. max of the two gradients)
 - Manipulate local features (edge/gradient) and worry about global consistency later
- **Smart thing to do: work in log domain**
- **Limitations**
 - Color shift, contrast shift (depends strongly on the difference between the two respective backgrounds)

Other functionals

- **I lied, some people have used smarted energy functions:**
Todor Georgiev's initial implementation of the Photoshop healing brush.

Plan

- **How can you improve?**
 - Critique
 - Look at good pictures
 - Be critiqued
 - Missions
 - Find something you like
- **20 tricks**
- **Composition**
 - Viewpoint
 - Rule of thirds
 - Harmonic analysis
 - Background, clutter
 - Gaze, saliency
 - Gestalt
- **Photos that "pop"**
- **Portrait**
 - Lighting
 - Makeup
 - Digital makeup

What do I know about good pictures?

- Not much: amateur photographer, mostly birds and candid portraits

Is there a science of aesthetic?

- Well, that's an interesting question...

Are there rules of aesthetic?

- Well, that's an other interesting question...

View it as a vocabulary to talk about pictures

- It's like wine: you describe taste with lots of poetic and metaphorical words
- It does not matter if they're meaningful
- It gives you a support to think about it
- If you don't need it: good for you, ignore what I say

Computational photography

- When studying good photography principles & techniques, you might want to wonder:
 - Can we automate ?
 - Can we facilitate? Provide easier manipulation tools?
 - What are the dimensions of variation, what “aspects,” or “components” of images are important

How to
improve?

Take pictures, critique your pictures

- And get them critiqued

Look at good pictures!

Copy photographs

Check out the web

Missions

- Give yourself a theme, constraints
- Look at contests online:
 - <http://www.dpchallenge.com/>
 - <http://www.fredmiranda.com/>
 - http://www.nyip.com/sub_idx_pgs/contestidx/wrldwide.php
- Work with friends, critique

Tips

Technical points

- Know your equipment
- Understand the parameters
 - Shutter speed, aperture, focal length, depth of field
 - Debrief your photos, look at the EXIF metadata
 - See Lecture 2 & Eric Chan's slides: <http://people.csail.mit.edu/ericchan/tmp/photo-2005-11-11-ec.pdf>
- Check your exposure
 - Histogram, blinking highlights
 - Unless you shoot HDR
- Sharpness matters
 - Choose the right shutter speed
 - Use a tripod
 - Image stabilization rocks
 - Focus on the appropriate thing
- Optics matters
 - Use a good lens
 - Put the hood on

42 advice

- Collected from random books,
- Just guideline
- When you do an effect, exaggerate. No middle ground. In particular, if you break one of the advice after, do it frankly
- Don't just take photos, edit them, study what went well, what's wrong

Composition

- Find a center of interest
- Don't center everything (e.g. rule of the thirds)
 - Careful with autofocus
- Change your viewpoint, move your feet!
 - Get close (if you can't get it good, get it big [John Shaw])
 - Try unusual viewpoints
- Try different focal lengths
 - Telephoto, wide angle
 - Focal length allows you to control the relative size of elements at different depth (moon in particular)
- Careful what you cut off
 - Sweep edges of frame
- Build on lines and curves
 - But careful with near-parallelism
 - Careful with converging perspective
- Include framing elements

Framing

Don't center

Rule of the thirds

National Geographic Photography field guide

The rule of thirds is a guideline developed by artists centuries ago. When the subject—or its most important element—is placed near one of the intersecting points of an imaginary grid, the viewer's eye is led through the frame. The result is an aesthetically strong image.

JACKING ASPEN GROVE, COLORADO.
Black TA. When you're in a tight spot, get it big. Photo: John Shaw

Photo John Shaw

Don't center: Crop

Don't center, especially for motion

Sweep the frame to check for trouble

- Cropped element, distracting object, non-parallel line

Careful with frame edges

Photoshop

Frame your subject

Frame Your Subject
Try framing your picture with foreground objects to add depth to the image.

Viewpoint, perspective, focal length

Get close

- Our eyes tend to “zoom” and forget how small the subject is
- or crop (but then you lose resolution)

Get close to your subject

<http://www.fotofinish.com/resources/centers/photo/takingpictures.htm>

Viewpoint

- High viewpoint

Use unusual viewpoints

Photo National Geographic

Avoid accidental alignment

Avoid Mergers

As you position yourself to avoid a cluttered background, also look out for trees, lamp posts, and other background objects which might merge with your subject in unfortunate ways.

Don't let a tree grow out of your subject's head

Reposition your subject or yourself to avoid mergers

<http://www.fotofinish.com/resources/centers/photo/takingpictures.htm>

Avoid accidental alignment...

- Unless you mean it

Special effects

- In general, accidental alignments are bad

Lenses

National Geographic Photography field guide

Recommended Lenses			
Situation or Subject	Most Appropriate Lens	Other Lens Choices	Other Lens Choices
A small coin, butterfly, or a single flower	True macro lens for high magnification	Macro zoom lens for lower magnification	Extension tube or supplementary close-up lens (see glossary)
Distant sports or racing action	Telephoto lens of 400mm or longer	Zoom lens including 300mm or longer focal length	2x or 1.4x teleconverter on a shorter telephoto lens; tripod or monopod
Tall buildings or trees	24mm to 35mm perspective-control lenses	Conventional wide-angle lens, or short telephoto from a greater distance	n/a
Distant bird or small animal	500mm telephoto	500mm f/8 mirror lens or zoom including 400mm focal length	Teleconverter on a 300mm or 360mm lens; tripod in all cases
General wildlife	300mm lens or zoom with 300mm	400mm lens or zoom with 400mm	Teleconverter on 300mm lens; tripod
Cramped interiors	Ultra wide-angle lens, e.g. 20mm. Full-frame fish-eye lens if distortion is acceptable	Wide-angle lens, e.g. 28mm	May need tripod or fast film
Indoors, where flash and tripod are not allowed	"Fast" 50mm f/1.4 or f/1.8 lens	Any f/2.8 lens	Table-top tripod; "fast" ISO 400 or 800 film
Sports subjects at various distances	100-300mm (or similar zoom)	Longer zoom	Teleconverter with a 200mm or longer lens; ISO 400 film; to stop action
Landscape or cityscape from a fixed position	20-35mm focal length	28-80mm zoom or 80-200mm for compressed perspective	n/a
Head and shoulders portraits of people	85mm to 135mm	70-210mm (or similar) zoom lens	1.4x teleconverter on a shorter lens
Large groups or family gathering	28mm lens or wide-angle zoom	24mm or shorter focal length in cramped quarters	n/a

Perspective vs. viewpoint

- Focal lens does NOT ONLY change subject size
- Same size by moving the viewpoint
- Different perspective (e.g. background)

Snapshot-Perspective-Speed, aperture-Filter-Lighting-Processing & Print-Make up-Retouching

Focal length & composition

- With the focal length, you control the relative size of objects at different depths

Try unusual focal length

- Wide angle for portrait
- Telephoto for landscape & architecture

Isolate detail (crop)

Isolate detail

+ boost colors with curves

Detail/pattern

Play with reflections

Changing viewpoint

This conventional view of the Mezquita of Cordoba, Spain (above), works well as a record shot, but it is not the product of careful observation. Looking down from the same shooting position, I noticed the tower of the building reflected in a puddle of water. Placing the

camera nearly in the water, a wholly more intriguing viewpoint was revealed (right). An advantage of using a digital camera with an LCD screen is that awkward shooting positions are not the impossibility they would be with a conventional camera.

© Nikon Coolpix 990.

From Digital Photographer's Handbook

A little bit of geometry

- Build on lines, curves, convergence, and repetition

Build on lines

Build on lines and curves

From Digital Photographer's Handbook

Build on lines and curves

Yellow-crowned night heron
© 1999, Joe and Mary Ann McDonald

Build on lines and curves

Warning: near-parallelism

- In particular, keep horizon level
- Use crop with rotation to fix this

Don't let lines unintentionally throw your photo off balance. When you shoot the horizon or a building, keep the straight lines level—unless you're shooting at a dramatic, intentional angle.

Keep the horizon level

<http://www.fotofinish.com/resources/centers/photo/takingpictures.htm>

Try unusual angles

Try Unusual Angles

Be bold! Try turning your camera to 45 degrees before snapping a picture. Or instead of snapping it from eye level, kneel down or lie on the ground to get a more interesting shot.

Take a picture from an unusual angle

<http://www.fotofinish.com/resources/centers/photo/takingpictures.htm>

Unusual angles

Avoid near-parallel lines...

- Unless you mean it

Correct perspective (perspective crop)

- + you control reflection and perspective independently

Look for patterns

Look for patterns

Background, clutter

- Pay attention to negative spaces
 - Accidental alignments
 - Cluttered background
 - Sweep the edges of your frame
- Manage depth of field
- Simplify composition

Negative space

- The ground defines the negative space
- Usually overlooked
- Fundamental for balance
 - Also for typography

Avoid cluttered background

• Again, move your feet

Avoid Cluttered Backgrounds

Don't let a cluttered background overwhelm or obscure your subject. Move around, or lie down, to get a clear shot at your subject without the distractions.

A cluttered background can obscure your main subject

Reposition your subject or yourself

Photoshop

figure 7.17

with TC-14E,
on Laser Digital film.

creating one big, blue date. Close observation may reveal a background reflection of whatever is immediately behind the water, which could be dark shrubs, trees, a bank, and even clouds. This changes the reflection, giving depth and contrast to the scene. Reflected in the water:

The contrary is true as well. The background can squish a great waterfall or shoreline photograph. The busy patterns of reflected reeds, angles of covegrass, or interwoven tree branches can interfere with a subject as effectively as the real thing. Reduce the depth of field: make

Photo Moose Peterson

Distracting background

Get rid of exit signs

Isolate using blur

- Don't over-do it

Simplify, crop, clone/healing brush

From Digital Photographer's Handbook

Light & color

- Avoid harsh light... unless you want to play with shadows
- Sunrise & sunset are best
- Avoid direct flash
- Cloudy days are great as long as the sky is not in the picture
- For sunny days, shade areas are best

- Use polarizers to reduce highlights, enhance colors

Try black and white

It's cool

It might address confusing/messy colors

Add fill-in

3 Use flash outdoors

Bright sun can create unattractive deep facial shadows. Eliminate the shadows by using your flash to lighten the face. When taking people pictures on sunny days, turn your flash on. You may have a choice of fill-flash mode or full-flash mode. If the person is within five feet, use the fill-flash mode; beyond five feet, the full-power mode may be required. With a digital camera, use the picture display panel to review the results.

On cloudy days, use the camera's fill-flash mode if it has one. The flash will brighten up people's faces and make them stand out. Also take a picture without the flash, because the soft light of overcast days sometimes gives quite pleasing results by itself.

[Learn more about composing people pictures](#)

Subject is dark

http://www.kodak.com/eknec/PageQueRef.jhtml?pq-path=317&pq-locale=en_US

direct

off camera

ceiling bounce

wall bounce

Direct, on-camera flash is harsh and unflattering. Removing the flash from the camera, or bouncing the flash light from a nearby surface produces different effects. Light bounced from a ceiling, although commonly used, causes dark shadows in the eye sockets and under the nose and chin. The most successful technique indoors is to bounce light from a nearby light-colored wall.

Figure 10.1 illustrates four basic lighting techniques: direct, wall bounce, ceiling bounce, and off-camera direct. Each diagram shows a subject (a person) and a light source (a camera with a flash) in a room. Red lines indicate the path of light. In 'direct', light goes straight from the camera to the subject. In 'wall bounce', light reflects off the wall. In 'ceiling bounce', light reflects off the ceiling. In 'off-camera direct', the light source is positioned to the side, shining directly at the subject. Below the diagrams is a photograph of a person holding a camera with a flash, with a red line indicating the light path from the flash to the subject's face.

Correcting color balance
Looking at the original image (above left), the temptation to burn-in the foreground and sewe of the background in order to "bring out" the sheep is irresistible. Brief applications of the Burn tool on the foreground (set to mid-tone at 10 percent) and background hills, plus the Dodge tool on the sheep (set to highlight at 5 percent) produced an image (left) that was very similar to the scene as it originally appeared at the time of shooting.

• Nikon Coolpix 990.

From Digital Photographer's Handbook

- **Selection based on luminance + curve**

- **Selection based on luminance + curve**

A black and white photograph of a man with a full, light-colored beard and glasses. He is looking down at a piece of paper he is holding in his hands. The lighting is dramatic, with strong highlights on his beard and the paper, and deep shadows on his face and the background. The background is blurred, suggesting an indoor setting.

Correct tonal balance

Try black and white

- Tons of options in Photoshop
 - Gradient map, saturation, color channels, Lab, channel mixer

Color theory

- http://luminous-landscape.com/tutorials/colour_theory.shtml

Polarizers make colors more vivid

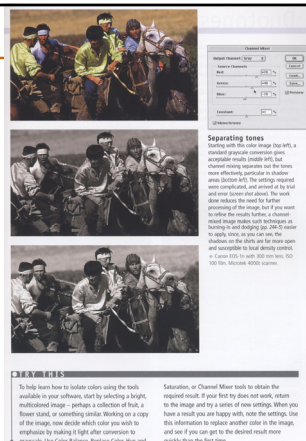

- by reducing glare, especially in vegetation

BLUEBERRY FIELDS, MAINE.
 Above: No polarizer. Below: With polarizer. Polarizers remove glare, and autumn blueberry leaves are exceptionally shiny. I took a photo without my polarizer, then added it for the second shot. What a difference the polarizer makes in this comparison.

Photo John Shaw

Landscape:

- Try telephoto, isolate detail
- Add a foreground focus
- Manage dynamic range

Landscape: put a foreground object

UNSHARPEN MASK (LAYER MASKING) DOES NOT PRESERVE LUMINANCE.
It only affects contrast and color.

In this photograph, I placed a 2-stop ND in the very top of the frame.

Photo John Shaw

Landscape: put a foreground object

Photo John Shaw

Portrait (and animal)

- Exploit shallow depth of field
- Make sure the face is illuminated (flash, post-process with photoshop)
- Focus on the eyes
- Shoot at eye level (unless you want a dramatic effect)
- Be patient, work with your subject, take lots of pictures
- Don't ask people to look at the camera
- Ask your subject to do something silly to relax them. Take the picture afterwards.

Shallow depth of field

Enhancing and Brightening Eyes

This is another one of those "30-second miracles" for brightening eyes, enhancing the catch lights, and generally drawing attention to the eyes by making them look sharp and crisp (crisp in the "sharp and clean" sense, not crisp in the "I burned my retina while looking at the sun" kind of crisp).

Step One:

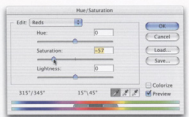

Open the photo you want to retouch. Go under the Filter menu, under Sharpen, and choose Unsharp Mask. When the Unsharp Mask dialog appears, enter your settings (if you need some settings, go to the first technique in Chapter 11, "Professional Sharpening Techniques"); then, click OK to sharpen the entire photo.

Step Two:

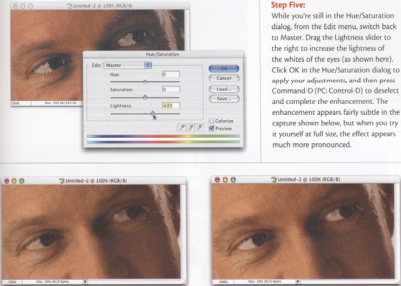

After you've applied the Unsharp Mask filter, apply it again using the same settings by pressing Command-F (PC; Control-F) and then apply it one more time using the same keyboard shortcut (you'll apply it three times in all). The eyes will probably look nice and crisp at this point, but the rest of the person will be severely oversharpened, and you'll probably see lots of noise and other unpleasant artifacts.

Step Four:
Go under the Image menu, under Adjustments, and choose Hue/Saturation. When the Hue/Saturation dialog appears, choose Reds from the Edit pop-up menu at the top (to edit just the reds in the photo). Now, drag the Saturation slider to the left to lower the amount of saturation in the reds (which removes any bloodshot appearance in the whites of the eyes).

Step Five:
While you're still in the Hue/Saturation dialog, from the Edit menu, switch back to Master. Drag the Lightness slider to the right to increase the lightness of the whites of the eyes (as shown here). Click OK in the Hue/Saturation dialog to apply your adjustments, and then press Command (PC)/Control (C) to deselect and complete the enhancement. The enhancement appears fairly subtle in the capture shown below, but when you try it yourself at full size, the effect appears much more pronounced.

Before After (bloodshot eyes lessened, and whites brightened)

Glasses highlight

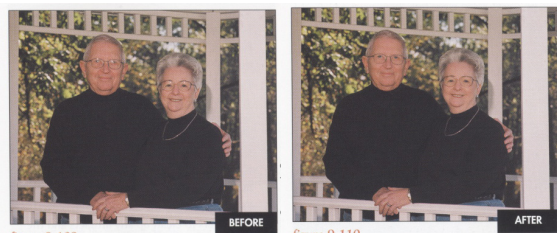

figure 9.109 BEFORE figure 9.110 AFTER

Add fill in light on faces

Add fill in light on faces

When You Forget to Use Fill Flash

Step One:
Open a photo where the subject is backlit by the sun, and your subject looks properly exposed. (Note: Don't worry about how the background looks—it will probably become completely blown out. That's OK for this demo. For now, just focus on making our subject look right.) If the subject slider doesn't bring out the subject enough, you may have to increase the highlights slider to the left to increase the highlights. When your subject looks properly exposed, click OK.

Step Two:
Drag the middle Input Levels slider (the one next to the BG) and your subject looks properly exposed. (Note: Don't worry about how the background looks—it will probably become completely blown out. That's OK for this demo. For now, just focus on making our subject look right.) If the subject slider doesn't bring out the subject enough, you may have to increase the highlights slider to the left to increase the highlights. When your subject looks properly exposed, click OK.

Step Three:
Choose the History Brush tool from the Toolbox (or choose from the History palette). Now, click on the subject's face. As you paint, you'll notice that you're actually painting in the lightest version of the subject you adjusted earlier with Levels.

Step Four:
Continue painting with the History Brush and your subject looks as if you used a Fill Flash when you're painting. If it appears too intense, just lower the Opacity of the History Brush up in the Options Bar. That way, when you paint, the effect appears less intense. You can see the final image here, with the background unchanged, but the subject is 'brought out.'

They don't need to look at you

Make them be silly... and wait

When most people first start to smile, it is enormous (A). A moment after a person smiles that laughing smile, the expression starts to relax (B). This is the only clients that don't have a problem with expression are the cheerleader-type girls or the few people that have that perfect "Colgate" smile. Although these types of clients will smile easily, the smile can have a "pasted on" From **Corrective Lighting and Posing** one without feeling or emotion. I call it a perform-

Shoot at eye level

- Important for small animals and kids

Not good

Better

Shoot at eye level

- Get low!

Or not

Sociable cat

Harmony of tone and hue come together in this image with contrasts in texture and line. But it is only a friend's cat being sociable and wanting to sit between us. As a digital photographer, you can take as many shots as you like and simply discard the unsuccessful ones. You can clean them up, too: here, the boards could be straightened a little and the object near the tip of the cat's tail could easily be removed.

© Canon D30 with 28-135 mm lens

From Digital Photographer's Handbook

Add vignetting

Vignetting

Adding a vignette returns the spread of light. In this low-key portrait (A), a vignette would block light from the lower part of the image (B), reducing the visibility of the lower torso and drawing attention to the subject's face.

From Corrective Lighting and Posing

Play with reflections

Hardcore Photoshop for portrait

- Vie before/after

Step Size:
To keep from simply painting in a blurry version of our photo, go up to the Options bar and change the History Brush's Blend Mode to Lighten. Now when you paint, it affects only the pixels that are darker than the blurred state. Ahhh, do you see where this is going? Now, you can take the History Brush and paint over the acne areas, and as you paint, you'll see them diminish quite a bit (as shown below). If they diminish too much, and the person looks "too clean," press Command-Z (PC: Control-Z) to undo your History Brush strokes, then go up to the Options bar and lower the Opacity of the brush to 50% and try again.

Before: **After:**

Chapter 9 **Portrait Retouching**

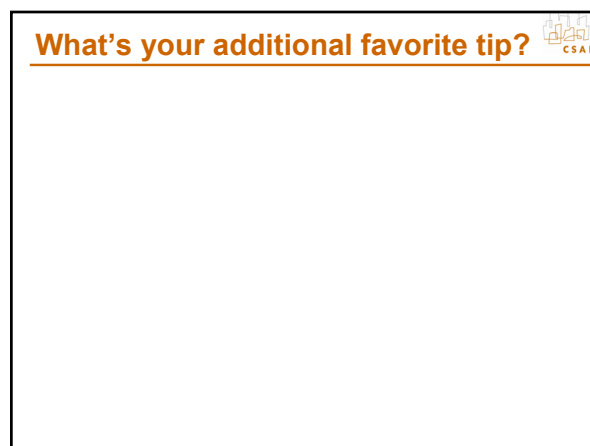

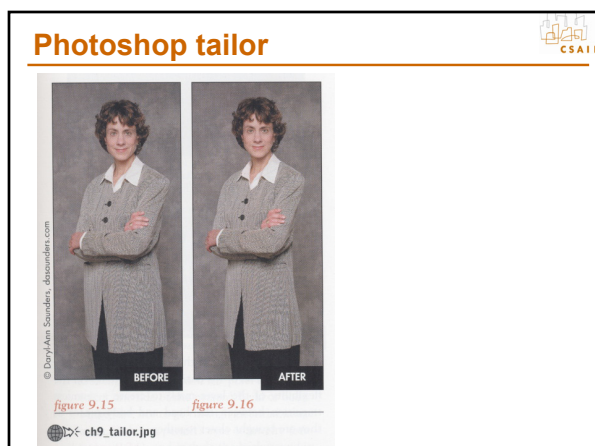

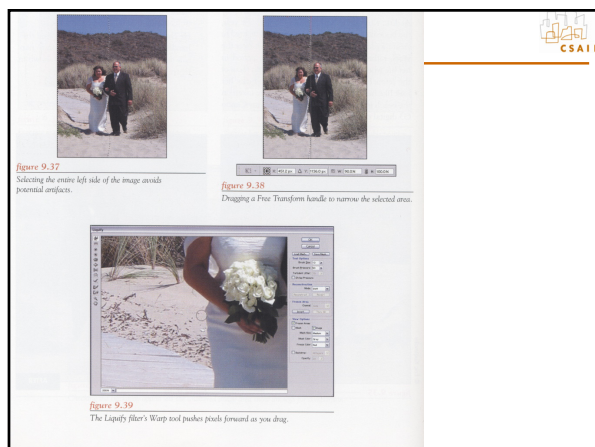

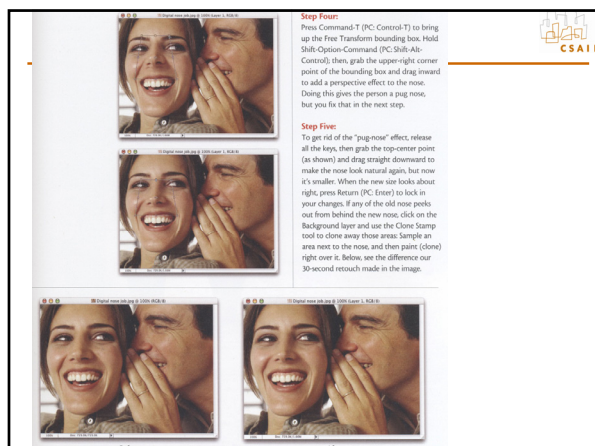

figure 9.47 **BEFORE** **figure 9.48** **AFTER**

© Phil Reid

Step Three:
Press the Left/Right Bracket keys on your keyboard to adjust the brush size until it's about the size of the person's cheek. Place the brush near the corner of the mouth (as shown here), click and "tug" slightly up. This tugging of the cheek makes the corner of the mouth turn up, creating a smile.

Step Four:
Repeat the "tug" on the opposite side of the mouth, using the already tugged side as a visual guide as to how far to tug. Be careful not to tug too far, or you'll turn your subject into the joke from *Barman Returns*. Click OK in Liquify to apply the change, and the retouch is applied to your photo (as shown).

Before: **After:**

42 Photoshop advice

- Shoot RAW, edit in 16 bits
- Try Lab, you might like it
- Use layers: not destructive, flexible
 - There are very smart ways to create masks
 - E.g. copy the luminance, invert it, threshold it, blur it
 - <http://luminous-landscape.com/tutorials/masking.shtml>
- Crop
 - Avoid centered subject, simplify composition
 - Rotate when important lines are oblique
- Manage contrast and brightness
 - Use the curve and layer masks http://luminous-landscape.com/tutorials/command_primer.shtml
 - Highlights and shadow
 - HDR local adaptation
- Correct colors and white balance
- Manage focus of attention
 - Blur/sharpen
 - A tad of saturation/desaturation
 - Edge burning, vignetting
- Remove distracting elements
 - Clone brush, healing brush
- Minor face makeup
 - Remove harsh shadows
 - Red eye
 - Reduce wrinkles with the healing brush. Do it on a separate layer, partial opacity
- Correct perspective keystone
 - Use the perspective crop
 - <http://luminous-landscape.com/tutorials/perspective.shtml>
- Try black and white
 - Opposite of previous page (it's too easy to exaggerate with digital)
- Soft focus vs. Gaussian blur <http://luminous-landscape.com/tutorials/glow.shtml>
- Improve the sky http://luminous-landscape.com/tutorials/white_sky_blues.shtml

Gestalt

Context: Gestalt psychology

- Early 20th century
- Inspired by field theory in physics
- Holistic philosophy of vision
 - “spontaneous” organization
 - Opposed to unconscious inference
- Has been integrated recently into modern framework
- Very popular in design

Prägnanz

- “Goodness”
- “Simplest” possible figure or organization
- Has recently been related to information theory (simple in terms of amount of information required to encode it)

Overview

- After low-level vision, we only know local frequency content, edges
- Need to organize the image
 - Segment by region, find structure

Prägnanz

- Cornerstone of Gestalt
- “Goodness”
- “Simplest” possible figure or organization
- Things are organized spontaneously and assumed to be in the simplest configuration
- Has recently been related to information theory (simple in terms of amount of information required to encode it)

Grouping

- By Proximity
 
- By Color
 
- By size
 

Grouping

- By Shape
 
- By Orientation
 
- By Synchronicity (simultaneous motion)
 

Grouping

- By Region
 
- By connectedness
 

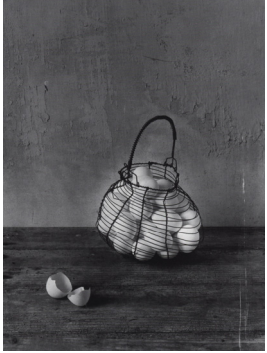

Grouping and photo

Edward Weston

Grouping and photo

Jean-Pierre Sudre

Plan

- Grouping
- Figure-ground
- Completion and illusory contours

Figure-ground

- What is in front (figure), and behind (ground)?
- There has to be one figure and one ground
- Related to occlusion and thus to depth
- Less attention is dedicated to the ground

Picture

Dark=figure

Light=figure

Redrawn after [Palmer 99]

Figure-ground

- The shape with the best “Prägnanz” is the figure
- Can be bimodal: we switch from one interpretation to the other
 - Visible on brain imagery
- But only one at a time

Picture

Redrawn after [Palmer 99]

Figure-ground painting

- Vassarely

Figure-ground pun

- Rubin vase

Figure-ground transition

- +grouping

Figure-ground simplification

- For depth enhancement
- The contrast at the occlusion edge is enhanced
- The figure is easier to extract

Figure ground simplification

- Using rim-lighting (a.k.a. back-lighting)
- See notes on limitations p.27

Closure & Negative space

- George Seurat
- Negative space are enclosed in the picture frame

Visual completion

- We complete the occluded part with the simplest shape (best “Prägnanz”)
- Related to continuation and closure

Redrawn after [Palmer 99]

Visual completion

- With no context

- With context

WORKS

Redrawn after [Palmer 99]

Relatable edges

- Completion can occur along relatable edges

Relatable Edges

Unrelatable Edges

Redrawn after [Palmer 99]

Visual completion

- Greg Brown (mural)

Completion

- Marc Riboud
- Completion is challenged

Portraits

Diffusion

I hate to say "always," but 98% of the time we diffuse each portrait that is taken. Since we are working with subjects who are at an age when skin clarity can be a problem, we recognize that their complexion can't handle the clarity of today's lenses. We use the Glamour Softs by Sailwind (#1). It softens the portrait without losing the critical sharpness in the eyes. I like to use a drop-in filter for easy focusing, especially as I get older.

From Corrective Lighting and Posing

Pose: chin

(Above and Opposite) Correct posing helps to hide the neck, common problem area for portrait clients.

From Corrective Lighting and Posing

Pose: waist

From Corrective Lighting and Posing

Arm position

From Corrective Lighting and Posing

Pose: ears

From Corrective Lighting and Posing

Turning the face toward the main light and directing the eyes back at the camera reveals more of the white of the eyes. In most cases, the problem is simply a matter of the main light having been positioned too high. Control with corrective lighting requires more skill, more time and more money. You must position and re-position each light,

From Corrective Lighting and Posing

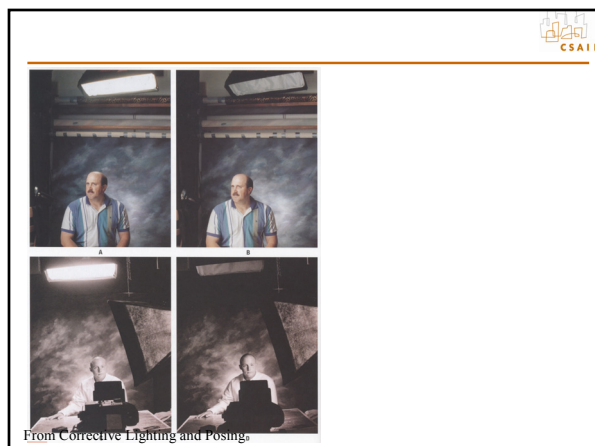

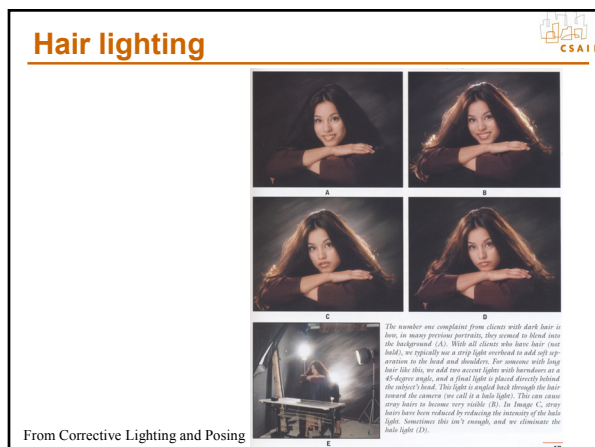

some men, because only athletic men normally ask to take a photograph in clothing that shows their legs or thighs. Women, however, are often told they should wear dresses, tight skirts and pants—even when it would be in their best interest not to.

When posing female subjects in a full length pose, I always have the person sitting or laying down. Unless a person is very tall and thin, she will always look better posed in

With feet flat on the floor, legs don't look their best (A). Lifting the heel flexes the calf and thigh muscles, making the legs appear longer and firmer. This can be accomplished by wearing high heels, or simply lifting the heel into the same position as if the subject were wearing high heels (B).

From Corrective Lighting and Posing

CSAI

susan

photographer Massimo Rubecchi

This picture will illustrate that an overcast day can be vastly superior to sunshine, especially if you are shooting in monochrome. With light coming more or less evenly from all directions, the tonality can be exquisite.

niña detras de la ventana

photographer Daniel Perdomo

A perfect moment, captured by chance - or careful planning? The subject is a young girl, and the lighting is soft and even, creating a high-key effect. The subject is positioned in the center of the frame, and the background is a simple, light-colored wall.

chinese hair

photographer Frank Wartenberg

There is no shortage of lighting equipment here. Frank Wartenberg has assembled an impressive array of soft boxes and other studio reflectors, above, below and around the camera.

Anecdote about brainstorming

- From Chuck McVinney
 - (but my memory might be faulty)
- Interesting technique to think out of the box:
 - Brainstorm for a little while
 - Then select the stupidest idea that was given
 - Work to make it into something useful
- One successful example:
 - A luminaire factory discovered they had a productivity problem. The luminaires had to be protected before getting packed, which was done by wrapping them into newspapers. Unfortunately, the workers were getting distracted and read the newspapers.
 - The most stupid idea during brainstorming was to poke their eyes.
 - The practical solution was to hire blind people, which had a number of benefits, in addition to alleviating the journal-reading problem. These people traditionally had a hard time finding a job and became extremely dedicated to their employer. In addition, the company acquired a glowing reputation as a social employer.
