

we continue 2.15pm

Group Project: Help with Building

6.S063 Engineering Interaction Technologies

Prof. Stefanie Mueller | HCI Engineering Group

today:

create groups of 3 teams each.

in the small groups, each team:

- quickly **summarizes final project idea** again
- explain what they want to **build for the final demo**
- **discusses any open question**
 - e.g. which sensors to use
 - e.g. what would be the best interactions to select for prototype

**10 min per team,
then switch.**

before we form the bigger groups,
let's spend **5 min in your own team**
to define how to build the final prototype and what to demo.

(it might be helpful to prepare some sketches for the group discussion)

team up!
<5 min>

pair up in groups of 6!
(ca. 3 teams)

let's go!

what to do:

in the small groups, each team:

- quickly **summarizes final project idea** again
- explain what they want to **build for the final demo**
- **discusses any open question**
 - e.g. which sensors to use
 - e.g. what would be the best interactions to select for prototype

**10 min per team,
then switch.**

end.
